

CYBER INTERVENTION

CNI Attack

Disrupt a pipeline which supplies your target with fuel, temporarily stopping their operations.

Effective

2

Responsible

-2

TECHNOLOGY

Default Passwords

The target has not set strong passwords on their key systems, allowing easy login and control. Default passwords are freely available on the internet.

0

Responsible

0

GOVERNANCE

Cautious

A cautious and hesitant government means that your ability to operate may be constrained or limited.

Effective

-2

Responsible

1

GOVERNANCE

Questionable Values and Ethics

You carry out your cyber activities with little regard for wider consequences.

Effective

0

Responsible

-2

GOVERNANCE

Lack of Oversight

You operate independently, with no oversight from independent democratic bodies.

Effective

0

Responsible

-2

GOVERNANCE

Values and Ethics

Your operations follow the principles of responsible behaviour in cyberspace set out in Responsible Cyber Power in Practice.

Effective

1

Responsible

1

TECHNOLOGY

Internet of Things Device Attack

A target's IoT devices, such as home appliances, are often insecure and can be compromised easily.

Effective

1

Responsible

1

INTELLIGENCE

Agent Recruitment

Recruiting an agent within an organisation allows you to understand more about the target, increasing effectiveness and reducing the risk of unintended consequences.

Effective

1

Responsible

2

INTELLIGENCE

Signals Intelligence

Intelligence agencies routinely collect intelligence through the internet to protect national security, detect and prevent serious crime, and preserve economic wellbeing.

Effective

2

Responsible

1

GOVERNANCE

Legal Authority

Your operation is carried out in accordance with both domestic and international law.
